

# LX22 CROSS LINE LASER

## LX22 Cross Line and Dot Laser

The LX22 line and dot laser is a very easy to use, one button operation, self levelling cross line laser with plumb spots up and down.

The super bright laser lines are visible over 25-30m which makes this the "must have" tool for all your levelling applications.

The Kit comes with a swivel base magnetic bracket, a tripod with an adjustable head, a target plate and a canvas carry pouch.

Added to this there are two optional brackets. The ceiling bracket which is used for fitting suspended ceilings. The clamp bracket which will clamp onto a pipe or anything up to 45mm such as the edge of a door. The clamp bracket is particularly useful for electricians as it can be mounted on the base of the tripod and set a horizontal line as low as 150mm from the floor.

The LX22 has a Lock function which locks off the self levelling so lines can be set at any angle. This function also protects the levelling mechanism whilst in transit.

### Optional Accessories:

- Laser detector for outdoor use
- Ceiling bracket
- Clamp bracket

### Specification
